

The **ACTION PRO** is a lightweight and compact Fluid Head offering true fluid drag and professional features for sophisticated **DIGITAL CAMERAS** weighing up to 6 Kg (13 lbs).

It features the **CARTONI** patented **FLUID DRAG** modules both in pan and tilt and a double spring counterbalance module including "0" spring setting.

The **ACTION PRO** head comes equipped with quick release sliding camera plate, orientable pan bar, positive locking pan and tilt movements and spirit level.

A sturdy lightweight tripod with 75mm bowl, mid level spreader and orientable rubber feet completes the system.

For additional creativeness, add a third axis to the **ACTION PRO** with the **DIGIDUTCH**. This smart accessory allows you to shoot "Dutch angles" on your **ACTION PRO**, and attaches to the sliding camera plate with the simple 3/8" screw and supports the camera on a larger sliding base plate, allowing lateral centering.
