

ENG TRIPODS

Lightweight and extreme stability, together with a fast display in action, are the main features of the ENG tripods.

Available in three versions: the basic 3 tubes, the classic ENG one stage and the double stage, all available in lightweight aluminum or ultra-light carbon fiber.

Height adjustment is performed by a fast, easy to reach clamp and includes a safety lock to prevent accidental falls.

The bottom foot includes a threaded spike receiving the adjustable rubber foot and interfaces with dollies and ground spreaders.
